

Pipeline pigging and integrity technology

Edited by John Tiratsoo and BJ Lowe

3rd Edition – September 2003

THIS LATEST edition of the standard reference to pipeline pigging contains 41 new technical contributions from an international panel of expert authors. The book provides a wide-ranging overview of the best in pigging and integrity-monitoring technology, and thus makes essential reading for all involved in these increasingly-important industries. The contents are divided into six sections, dealing with utility pigging, corrosion issues, intelligent pigging, case studies, and integrity management, and prefaced by a section with a number of important, but general, papers.

The role of pigging in maintaining and expanding the pipeline infrastructure has become more critical due to projected increases in oil and gas consumption and thus transportation capacity. At the same time, the ageing of networks in the US and elsewhere to 60+ years (30-40 years beyond design life, by some estimates) – and the installation of new lines over greater distances and more hostile environments – have made the technical requirements and demand for pigging technology ever more acute. The science of pigging is developing to provide the technology required to keep these pipelines in the best possible condition, and to ensure their continuing integrity. There are few problems that the pigging industry cannot solve nowadays, and this book includes a number of case histories showing what can be achieved in practice.

But pigging is not just about high-level inspection; rather, the basics of pipeline design and of utility pigging to accommodate the most mundane tasks, are in the long term probably even more important. If the pipe is not designed to be 'piggable', and if it is not kept clean and in a good condition, the best of inspection tools will be rendered useless. Accordingly, the book also includes a number of contributions on these more-basic aspects of pigging operations, which make necessary reading for engineers involved in these aspects of the pipeline industry.

Pipeline pigging and integrity technology, published in September, 2003, is 6in x 9in, hard bound, and has 500+ fully-illustrated pages. It is jointly published by Scientific Surveys Ltd (UK) and Clarion Technical Publishers (US), and costs £76.50/\$125 inc. airmail postage.

Contents

(Note: author's contemporary affiliations are shown. Due to the passage of time, some of these have inevitably changed.)

Chapter 1 – General issues

- To pig or not to pig: that is the question – *Jim Cordell, On-Stream Systems, UK*
Developing a maintenance-pigging program – *J Frank Gray, Pipeguard of Texas, USA*
Pigging ‘unpiggingable’ pipelines: a guide for maintenance pigging and preparation for smart pig inspection – *Glen R Cameron, Exxon Co, USA*
Velocity control of pigs in gas pipelines – *Luke Matthews, Mark Kennard, and Aidan O’Donoghue, Caltec, UK*
Enhanced cleaning is cost effective – *Chris Kershaw, BG Kershaw, UK*
Operational safety in pigging – *Dr John Smart, John Smart & Assocs, USA*
Simulating pipeline pigging operations – *Professor Luis Azevedo, Artur M Braga, A O Nieckele, and P R Souza Mendes, PUC-Rio, Brazil*
Why pigs get stuck and how to avoid it – *Dr Aidan O’Donoghue, Pipeline Research Ltd, UK*

Chapter 2 – Utility pigging

- An overview of utility pigs: their types and uses – *Jim Cordell, On-Stream Systems, UK*
High-temperature and other specialized pigs – *Chris Kershaw, BG Kershaw, UK*
Pigs for cleaning highly-contaminated pipelines – *Barry Nichols, Fullkote Pipeline Services, Canada*
Choosing the right pig for the job – *John Spraggon, Pipeline Engineering & Supply, UK*
Pigging and chemical treatment of pipelines – *Dr John Smart, John Smart & Assocs, USA and Gary Smith, In-Line Services, USA*
Latest design techniques for dual- and multi-diameter pipeline pigs – *Dr Aidan O’Donoghue, Pipeline Research Ltd, UK*

Chapter 3 – Corrosion

- In-place internal corrosion monitoring systems and pipeline pigging – *Gerald Brown, Brown Corrosion Services, USA*
Assessment criteria for ILI metal-loss data: B31G and RSTRENG – *Pat Vieth, Kiefner & Associates, USA*
Mobil Oil’s experience with in-line detection and characterization of SCC – *Peter Marreck and Barry Martens, Rainbow Pipeline Co, USA, Dr Ravi Krishnamurthy, Mobil Oil, Canada, and Norman L Tozer, Tozer Engineering Consultants, Canada*
Flux leakage signals from corrosion defects in pipelines subjected to bending loads – *Al Crouch, Southwest Research Institute, USA, Thomas Beuker, H Rosen Engineering, Germany, and Bryce Brown, H Rosen USA, USA*

Chapter 4 – Intelligent pigging

- Batching an ultrasonic pig in a natural gas liquids’ pipeline – *John R Wilder Jr, Union Pacific Resources Co, USA*
Inspection of unpiggingable pipelines: experience, history, and the future of cable-operated ultrasonic pigging – *Robert van Agthoven, RTD BV, Netherlands*
Recent developments in avoiding, detecting, and assessing the severity of mechanical damage – *Dr Brian Leis, Dr Thomas Bubenik, R B Francini, Dr J Bruce Nestleroth, and R J Davis, Battelle, USA*
Cracks in pipelines and how to find them – *Dr Michael Beller, PII Pipetronix, Germany, Ernie Holden, PII Group, UK, and Dr Neb Uzelac, PII North America, Canada*

Tools, vendors, and services: a review of current in-line inspection technologies – *Dr Michael Beller and Dr Konrad Reber, NDT Systems & Services AG, Germany*
Unpiggable pipelines: an inspection challenge – *Ernie Holden, GE PII Pipeline Solutions, UK*
When is corrosion not corrosion? A decade of MFL pipeline inspection – *Paul Tims, TotalFinaElf, UK, and Owen Wilson, Andrew Palmer & Associates, UK*

Chapter 5 – Case studies

Progressive pigging for pipeline deposit removal – *Edgar J Dewar, Atlantic Richfield Indonesia, Indonesia, and Gary Smith, Knapp Polly Pig, USA*
Engineering the pigging equipment for subsea systems in the Campos Basin – *Antonio C F Lino, Carlos Mastrangelo, Fernando B Pereira, and Marcelino Guedes F M Gomes, Petrobras R&D, Brazil*
The development and testing of a 40-in high-friction pig – *Arne Vingerhagen and Christian Falck, Statoil, Norway*
In-line inspection of difficult-to-pig pipelines – *Fritz Bukman and Dr Rainer Schmidt, 3P Services, Germany*
Pneumatic testing the trans-Andean pipelines – *Alan Sweeney, BJ Pipeline Cleaners, USA*
Cleaning pigging for the baseline survey of the PGU2 pipeline system – *Hilmi Bin Ramli, Petronas Gas Sdn Bhd, Malaysia*
Pigging the Asgard 42-in x 28-in pipeline: breaking new ground – *Arne Vingerhagen, Statoil, Norway, Chris Kershaw, Chris Kershaw Ltd, UK, and Dr Aidan O'Donoghue, JP Kenny, A/S, Norway*
Lifetime for a pipeline – *Alastair Clyne, John Dalton, and David Jones, PII, UK, and Oscar Muschetto, TGS, Argentina*
Internal corrosion in small-diameter, heavy-wall pipelines: a critical phenomenon and how to measure it – *Peter AJ van der Veer and Sicco F Jager, Shell Global Solutions, Netherlands, and Fritz Bukman and Dr Rainer Schmidt, 3P Services, Germany*

Chapter 6 – Integrity

Pipeline integrity management in SSB/SSPC – *Chuong Yu Teck, Sarawak Shell Bhd, Malaysia*
Shell Pipeline's risk-based inspection process – *Michiel Jansen, Bert Pots, Cees Vormann, and Maarten Festen, Shell, Netherlands*
Fitness-for-service assessment for pipelines subject to stress-corrosion cracking – *Dr Carl Jaske and John Beavers, CC Technologies, USA*
The synergy of combined technologies: a comprehensive method of pipeline integrity evaluation – *Pam Moreno, Tuboscope Pipeline Services, USA, and Gary Lauer, Buckeye Pipeline, USA*
Scheduling integrity re-verifications – *W Kent Muhlbauer, WKM Consultancy, USA*
Pipeline integrity-verification methods: direct assessment, in-line inspection, pressure-testing – *Pat Vieth, CC Technologies, USA*
The changing world of pipeline integrity – *Dr Phil Hopkins, Penspen Integrity, UK*
